About Us

In 60 years our roots have always been part of the Italian entrepreneurship of industrial and crafts companies. We grow up by facing the market and its challenges thanks to our values, the same values that allowed us to overcome several difficulties (always stimulating, though).

Synergies between brands, proposals of creating business networks, strategies that continue to evolve: such actions made us evolve continuously, always towards the future. From our past we derived experience and professionalism. Today we continue to innovate and we are already prepared for the future. We are a company with ethical values, innovation and respect towards the environment.

Developing new products to be positioned on new market's areas is the challenge we want to face and win. We work with passion and constancy. We want to create a better life for this generation and the next one.

Our choice to offer a preliminary consultancy to our customers is an important value that is based on the work of a professional team specialized in the design of furnishing systems.

Brands

"The power of dreams is in our ability to pursue them and make them come true"

vastarredo

Furniture for children

Dinner tables, also suitable for other activities, are here proposed in many shapes and different dimensions.

Prime matters are also different in order to meet the specific needs of our clients.

The common denominator is the core structure,

made of legs of solid beech wood with a circular section, while the top is made of panels of wooden conglomerate, plated on both sides with plastic laminate with solid beech wood edges.

Both legs and edges are varnished with natural non-toxic paints.

Specific requirements lead us to propose solutions that meet specific needs:

for the meal of children in kindergarten we propose three different table typologies to fit the high chairs.

✓ Furnishing systems for kindergarten and pre-schools

Tables used for meals and activities, with different shapes and dimensions and legs in solid beech wood with a circular section, are here proposed with top made of plywood beech, rounded edges and varnished with non-toxic paints.

The cart, always a symbol of mobility, is incredibly useful in kindergarten and pre-schools.

For every specific need we provide a different cart.

Even the prime building matters

are different: simple components or with more accessories are an ideal companion for children and teachers during the day.

They are easy to carry and put away when they are no longer used.

Nap time!

A moment of peace during the day. Here the space becomes important and functional: educators can also associate other activities (reading, relax, etc.) thus resulting in a fundamental part of the daily routine in kindergarten and pre-schools.

UNI EN 1729-1
heights and lengths

Anthropometric Desk

ANTHROPOMETRIC DESK

Single-seater desk with adjustable elevation and inclination. Top made of plywood beech 90x65cm with glued-on plastic laminate beech colour. Tubular frame \varnothing 45 mm thickness 2 mm.

Upper joint part made of a square tube size 35x2 mm, shaped in order to avoid hindrance to the disabled user. Four adjustable feet to get better stability, two wheels recessed inside the tube, which allow the teaching staff easily moving the desk from a classroom to another.

The upper side height can be adjusted by means of a two chromed and calibrated columns sliding inside two high strength PVC bushes, driven by a removable crank, which allows a millimetre regulation of the working plane from 70 to 92 cm.

Adjustable inclination by means of an endless screw controlled by a side-mounted recessed crank, which allows an inclination from 0° to 25°.

The gradual adjustment allows meeting any ergonomic and visual requirement of the desk's user. The top is equipped with a recess, which is deeper towards the inner side, so that the disabled person can lay his forearms.

The working top is provided with a tubular border \varnothing 18, which prevents the accidental fall of objects and a penholder in the upper part and a graduated rule serving as a paper clip in the lower part.

The tool outfit includes a fold-back book-holding system, which allows holding the book opened on the top, preventing the accidental closing of pages. Epoxy powder painting with antioxidant treatment subsequent baking at 180° in the standard colours.

ANTHROPOMETRIC DESK VISUALLY IMPAIRED

The desk is adjustable in height by means of a removable crank which allows the control only by the teachers or by the students, in order to avoid alterations not authorized.

The adjustment takes place by means of an endless screw.

The lower height is of 58cm and the maximum height is of 82cm.

Top inclination from 0° to 85°. The gradual adjustment allows a better posture for desk's user. The working top is provided with a tubular serving as a paper clip. The desk is complete with metal grid in the lower part.

The metal structure is complete with two wheels which allow an easily movement of the desk.

Top dimension: 70x60cm.

Epoxy powder painting with antioxidant treatment subsequent baking at 180° in the standard colours.

Ultralight staging

ULTRALIGHT STAGING

■ *Fast and efficient*

The concertina aluminium risers can be opened in seconds then secured the stage deck with the twist of an allen key.

■ *Lightweight but strong*

All components are light in weight, to reduce the overall of the stage components without compromising on strength and durability.

■ *Versatile and adaptable*

In a great selection of sizes and shapes you can create exactly the right stage configuration for your performance or event.

Ultralight staging offers a totally flexible staging solution.

Utilising lightweight aluminium for the supporting stage risers and stage deck frame, all components are incredibly light to handle and easy to transport, yet very strong and robust.

You can create a multitude of stage configurations from the selection of seven deck sizes and five riser heights.

The staging has recently been subjected to rigorous testing by TUV and passed with flying colours. This is a real accolade and further endorses the quality of this British made staging system that now has internationally recognised accreditation.

Simple steps to build your stage

- Passed 180 kg. point load test
- Tested to 1000Kg/mq. for even load distribution

Simply take your stage riser.

Extend the riser fully.

Place the stage deck on the stage riser so that the holes in the underside of the stage deck meet the securing screws located on the corners of each riser.

Simply tighten with an allen key.

Once all the decks and risers have been joined together you can now join each platform together by turning the screw located in the centre of each deck.

Two risers can easily be joined together for extra height.

After use, the stage decks and risers take up very little space for storage.

To Order: Select deck | Select riser height (see page Ultralight Staging Riser) | Select colour

Furniture for libraries

Modular library cases single face.

functionality, flexibility, ease of use, no tools required, interchangeability, ease of movement via spinning wheels (with stop) to reorganize spaces according to the new needs of a modern library.

Modular library cases double face

the same logic behind the single face version also applies here: by doubling the side part, the structure can host many different parts.

LIBRARY CASES WITH FULL SIDE PART | FINISHINGS STRUCTURE

LIBRARY CASES SIDE | FINISHINGS LEDGE

Modular library cases with solid wood sides

Using the same design logic behind the modular library cases with full sides, here we propose a library case with a grid side in solid beech wood with a rectangular section, varnished with natural colors that make the wood stand out. dimensions and accessories are the same for both library cases types, single or double face.
